

FERRATA.BLOC

THIRD ARM

additional tool for steep passages of a via ferrata

Art.no.: AS00FB

The FERRATA.BLOC is your reliable and safe partner in any via ferrata! It acts as a "third arm" and brake which only allows upward movement. When you want to take a break, it locks directly at the point of contact with the wire. By taking enough breaks and the additional psychological safety effect, falls can be prevented.

Attention: The FERRATA.BLOC must be used as an additional tool with a certified via ferrata set only. It is not meant to catch a dynamic fall, but rather to prevent it by the possibility of taking a break. Find all information concerning suitable via ferrata sets in the manual.

Features:

- Blocks in vertical passages immediately - on the spot!
- Energy absorber integrated!
- Silver-colored side ("this side up") must always point upwards and is hooked in as the uppermost, then follow the carabiners of your via ferrata set!
- IMPORTANT: suitable for a steel rope diameter of 12-16mm!
- Via ferrata must necessarily have a vertical rope guide and "traditional construction" (= tensioned rope between the anchors)!
- Never replaces a via ferrata set and must not be used alone!

use cases:

via ferrata

Technical specifications

BODY	Material: steel Color: colorless Finish: zinc-plated
HANDLE	Material: polymer Color: black
IN-WEBBING BR.	Material: textile Color: black

WEIGHT	319 g
LENGTH	110 mm
WIDTH	75 mm
TOTAL LENGTH	94 cm
RECOMM. ROPE DIAMETER	12,0 - 16,0 mm
GATE OPENING	20 mm
COUNTRY OF ORIGIN	Austria
EAN CODE	9006381600021
 Patented	
STANDARDS	PSA Richtlinie / ppe dire
